

ELANTAS PDG, Inc. Shelf Life Policy

ELANTAS PDG, Inc., (EPDG) manufactures protective coatings and resins used in the electrical, electronics and other industries. Many of these coatings and resins are, by design, chemically reactive substances that may change during extended storage, limiting their useful life.

EPDG warrants the shelf life of products from the date of shipment from our St. Louis, Missouri and Olean, New York facilities. Shelf life and date of shipment appear on the product label attached to the container.

EPDG warrants that product will be usable for its intended application for the period specified on the container. Product must be stored in its original, unopened container under conditions specified on the associated Technical Data Sheet.

ELANTAS PDG, Inc. does not recertify product or extend warranted shelf life of product once it has left our facility. EPDG will retest a sample of a customer's expired resin for a fee of \$350.00 per sample. The test report will include the test parameters and results of the tests. EPDG will not make a recommendation to the customer for or against using the expired product, even after testing. The customer must use the reported test results and his own discretion to make that decision.

ELANTAS PDG, Inc. will not accept the return of expired product for disposal or credit.
