October 2017

Subject: Aromatic Diamine Change TU-801 Part B

To whom it may concern:

Formulated Resins wishes to inform you of a change in formulation to CONATHANE TU-801 Part B Curative.

This change is due to a supplier modification of the aromatic diamine used in TU-901 Part B. The supplier is adding an antioxidant to improve the color stability of the new material.

The new formulation will maintain the same properties and characteristics as the original formulation, there will be no change in manufacturing location or processes, and there will be no change in product name.

We are currently working through our internal Management of Change (MOC) qualification process.

If you have any additional questions, please contact your sales representative.

With best regards

Stephanie Pikulski
